

Can I use crop residue from GE corn as a bulking agent for my compost?

Yes. There is no restriction on manure, or components of manure, from non-organic sources. From the preamble to the final rule, "existing standards routinely permit the use of manure from nonorganic operations with appropriate oversight...a certifying agent can require residue testing when there is reasonable concern that manure, either raw or as a component of compost, contains sufficient quantities of prohibited materials to violate the organic integrity of the operation."
